WingMan® Strike Force™ 3D

Force Feedback • PC • Twist Handle • USB

If you're not playing with force feedback, you're missing out on an entire dimension of excitement and realism. Logitech's premium stick is a powerful tool for powerful competitors.

More power, more realism. Feel powerful and ultra-realistic weapon recoils, missile launches, collisions, and more with this premium force feedback joystick.

- Select and fire weapons quickly with the unique wheel button
- Stronger motors deliver more powerful forces.
- Take complete command with nine programmable buttons, two hat switches, and a precision throttle.
- Turn on a dime with precise twist-handle rudder control.
- Start playing right away with pre-configured button maps for hundreds of popular PC games.

More Power, More Realism

- Select and fire weapons quickly with the unique wheel button
  In battle, speed and versatility are essential to victory. Now you can instantly scroll through weapons or strafe with lethal speed. This is just one more Logitech innovation designed expressly to give you the decisive advantage.
- Stronger motors deliver more powerful forces
  Strike Force 3D is a powerful tool for powerful competitors. It delivers all the force feedback realism-in big doses. This premium, extra-strength joystick will put you right into the action. Can you handle that?
- Take complete command with nine programmable buttons, two hat switches, and a precision throttle
  With three MiGs on your tail, reaching for the keyboard is a luxury you can't afford. Why not deal with them more directly? Strike Force 3D gives you instant access to all of your weapons and countermeasures, plus the ability to keep an alert eye out for friend and foe.
- Comfortable stick with intuitive button placement
  Don't let discomfort cramp your style. Our famous joystick grips and button orientation let you hunt down all the bad guys, dispatch them efficiently, and still have the dexterity to quickly type taunts explaining exactly how good you are.

- Turn on a dime with precise twist-handle rudder control
  Whether your plane is a delightful touring craft or something more lethal, you need to be in complete control. There should be no wrong turns with Logitech twist-handle technology.
- Stable, heavily weighted base
  It's rare indeed for a pilot to yank the joystick right out of his cockpit. And with Strike Force 3D, there's no reason for you to suffer that pain and embarrassment either. It's heavy.
- Bundled game
  Just in case you are the only person on the planet who doesn't have a force feedback game, or more likely, your advanced skills have frightened off all the competitors in your current game, Logitech is throwing in a great game for you to enjoy. So enjoy!
- One-year warranty

Logitech WingMan Profiler software for PC

- Customize button and force feedback functionality
  Every game is different, and so is every gamer. We know that. So we provide this versatile software that allows you to have things your way.
- "Double" the number of buttons with the shift-button
  Are you a control freak? We are too. Enable the shift button functionality to turn all those buttons and hat switch functions into twice as many.
- Quickly switch between game controllers
  Fly your plane, drive your car, and then kick the ball around without being frustrated by controller configuration. Our software lets you easily manage and switch between your Logitech game controllers.
- Includes profiles for hundreds of popular PC games
  We're quite sure that you know exactly how you want to set up your controller for your favorite games. But just in case, we've thrown in a few hundred of our favorite configurations.
- Easily download new game profiles
  As if the profiles we ship with the controller weren't enough.
- Print out profiles for quick reference
  We hate losing buttons. So we like to print out our game configurations for quick reference.
